The Global LNG Bunkering Experience
9 – 10 March 2021

**Aldas Norvillas | Logistics Manager | Klaipėdos
Nafta**

What are you currently responsible for within the LNG Bunkering Sector?

I do represent LNG Commercial unit at KN, where I am responsible for managing LNG logistics operation.

What organisations/industry do you work with most frequently?

Working with gas industry companies (traders) most frequently. Besides trades, we are communicating with vessels owners and operators, agents, suppliers & others in order to promote LNG bunkering in the port.

Which area of LNG Bunkering do you specialise in?

KN operates an on-shore small-scale LNG terminal - Klaipėda LNG reloading station. The infrastructure is dedicated mainly for truck loading and LNG bunkering.

What are the trends and opportunities for you and / or the sector currently?

Due to applicable emission control areas to minimize airborne emission from ships, more and more vessel owners & operators observe LNG as a marine fuel to comply requirements which opens new opportunities for development of LNG bunkering in the area.

Why is now a good time for The Global LNG Bunkering Experience and what do you expect to gain from your participation?

The Global LNG bunkering event is a great opportunity to present the existing LNG infrastructure, the activities performing by KN as well as to expand knowledge and experience in LNG bunkering.
