2021**

The Global LNG Bunkering Experience  
9 – 10 March 2021

**Thomas Guldner | President | Marine  
Firefighting Inc.**

---

**What are you currently responsible for within the LNG Bunkering Sector?**

Education & training - mainly of first responders & tugboat crews.

**What organisations/industry do you work with most frequently?**

LNG facilities in the USA, Mexico, and Australia - Local First Responders who may encounter LNG emergencies both on the water and those involving land based LNG transportation.

**Which area of LNG Bunkering do you specialise in?**

LNG Safety and Emergency Response Training for first Responders.

**What plans in terms of projects do you have over the next year/2 years?**

- Training first responders and LNG Facility Staff
- Training Tug Boat crews who escort LNG ships into and out of ports
- Addressing International LNG Conferences and Conventions

**What are the trends and opportunities for you and / or the sector currently?**

LNG training has evolved from only dealing with the marine transport of LNG and its safe transfer at LNG Facilities to LNG emergency response to LNG fuelled vessels, trucks, and locomotives.

**Why is now a good time for The Global LNG Bunkering Experience and what do you expect to gain from your participation?**

“LNG will figure into any response to our environmental concerns both in the marine area as well as land-based transportation, at least in the short term. With regulations that have recently gone into effect LNG is poised to meet and exceed those environmental regulations as well as many that are expected in the near future.
